Abstract

In this paper, we propose a Retrieval-Augmented Generation-based (RAG) approach for fair access to food data in developing countries. This work also contributes to achieving sustainable development goals, specifically goal 2: Zero hunger and goal 3: Ensure healthy lives and promote well-being for all at all ages. Actually, given that a lot of African food data is accessible only in PDF format, we firstly extracted and organized these data using the Open Research Knowledge Graph (ORKG) and the image data using the Firebase database, with the link to the corresponding food description in the ORKG. Consequently, we created 1888 food descriptions, 158 AFs, and
